DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 4, 2007 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 2-4, 6, and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,927,820 to Vignotto et al.

Regarding Claim 7, Vignotto et al disclose a connection between a wheel bearing 3 and a wheel carrier 4 (see Figure 2) having all the features of the instant invention including: connecting elements 37 only connecting the wheel carrier 4 and a fixed part 13 of the wheel bearing (see Figure 2 and column 2 lines 50-55), and at least one projection 26 formed integrally with at least the fixed part 13 of the wheel bearing 3 (see

Art Unit: 3683

Figures 2 and 3 and column 2 line 64 – column 3 line 3 and note the notched connection between the two parts), transmitting to the wheel carrier 4 a torque acting in the fixed part 13 of the wheel during braking (at least to some extent), projection 26 having a hole 36/37 therethrough (see column 2 lines 46-55), wherein the fixed part 13 of the wheel bearing 3 is structured to couple to a brake caliper 31 (at ears 30, see column 2 lines 37-45).

Regarding Claim 2, projection 26 is formed around connecting element 37 as shown in Figure 2.

Regarding Claim 3, see bolt 38.

Regarding Claim 4, see threaded section 36 which receives bolt 38.

Regarding Claim 6, the fixed part 13 of the wheel bearing 3 comprises a flange (see Figure 2).

Allowable Subject Matter

4. Claim 5 is allowed.

Response to Arguments

5. Applicant's arguments filed May 4, 2007 have been fully considered but they are not persuasive.

In response to applicant's arguments that the Vignotto reference does not disclose that the projection is formed integrally with at least the fixed part of the wheel bearing, the examiner contends that at least Figure 3 of Vignotto and the notched

Art Unit: 3683

connection between the fixed part 13 of the wheel bearing and the projection 26 meets this limitation of the claim. In short, Figure 3 illustrates that projection 26 and the fixed part flange 13 can be formed integrally with one another using notches 43. This notched connection effectively makes the two mating parts integral with one another. It is for this reason that the rejections of Claims 2-4, 6, and 7 have been maintained.
